KEY FEATURES	Limited vertical stretch reduces movement of redundant tissue	Reduces bunching in the popliteal region High performance black fabric	Distal construction with reduced stretch to control distal distraction.	Has antioxidants which are effective scavengers of free radicals and hydroxyl groups	Easy to don/doff especially for geriatric patients Provides comfort and elasticity GPDT-XL is ideal for bariatric patients.	Features a black fabric that allows for comfort and stability	Seamless knitted fabric makes it easy to don and doff Minimal distal distraction ensures a comfortable fitting and the best stability	Seamless knitted construction Rotational stability for locking version	Ease of knee flexion through an unlimited restriction of stretch anteriorly Posteriorly the fabric has 80% less vertical stretch	Allows the expulsion of sweat and air through a built-in valve	Allows complete freedom of movement without restricting blood flow High elasticity	Exposed gel allows the sleeve to seal on the liner just proximal to the trim lines The fabric cover located distally allows the air to wick out of the prosthesis
